Coal Combustion Residuals Impoundment Assessment Reports

As part of the U.S. Environmental Protection Agency's national effort to assess the management of coal combustion residuals (CCR), EPA released the final contractor reports assessing the structural integrity of impoundments and similar management units containing coal combustion residuals, commonly referred to as "coal ash," at coal fired power plants. Most of the impoundments have been given hazard potential ratings (e.g. less than low, low, significant, high) by the state, EPA contractor, or company which are not related to the stability of the impoundments but to the potential for harm should the impoundment fail. For example, a "significant" hazard potential rating means impoundment failure can cause economic loss, environmental damage, or damage to infrastructure.

EPA assessed all of the known units with a dam hazard potential rating of "high" or "significant" as reported in the responses provided by electric utilities to EPA's information requests and additional units identified during the field assessments. EPA will release additional reports as they become available.

The reports being released now have been completed by contractors who are experts in the area of dam integrity, reflect the best professional judgment of the engineering firm, and are signed and stamped by a professional engineer. The reports are based on a visual assessment of the site, interviews with site personnel, and the review of geotechnical reports and studies related to the design, construction and operation of those impoundments, if available. The engineering firms also reviewed past state/federal inspections of the impoundments. EPA contractors were not authorized to conduct any physical drilling, coring or sampling while on site; however, they did review studies which may have included such information. These reports include complex engineering evaluations and use terms which may be unfamiliar to the general public. Also, the contractors were asked to rate the impoundments as "satisfactory," "fair," "poor," or "unsatisfactory," terms commonly used in the field of dam safety. Expert experience has shown that only impoundments rated as "unsatisfactory" pose immediate safety threats. None of the impoundments assessed so far have received an "unsatisfactory" rating. Impoundment ratings noted in the reports should be taken in the proper context, since a unit may be found to be structurally sound while it may receive a fair or poor rating based on other factors such as lack of information. Further, the assessments represent a "snapshot in time" of the condition of the CCR unit. Following submittal of Action Plans by the utility, the utility may have provided EPA with additional materials which indicate that the condition rating of the unit may have improved since the time of the assessment, such as meeting minimum Factors of Safety in both seismic and steady state scenarios, increasing the hydrologic and hydraulic capacity of the CCR unit, or improved operations and maintenance procedures at the CCR unit, for example.

Draft copies of these reports were reviewed by the facilities and the states for factual accuracy and their comments on the draft reports were also posted. EPA continues to review the reports and the technical recommendations, and is working with the facilities to ensure that the recommendations are implemented.

EPA provided a copy of the final report to each facility and requested that the facility implement the recommendations in the reports and provide plans for taking action. These plans are posted below when they become available. Should facilities fail to take sufficient measures, EPA will take additional action, if the circumstances warrant, and will be devoting special attention to those facilities receiving a "poor" rating.

For facilities that have had their units assessed and submitted their action plans, EPA has informed facility owners and operators that in addition to implementing their action plans, an ongoing, routine program to assess these units and to take necessary corrective measures is needed to ensure the units' continued structural integrity. The ongoing responsibility for this lies first with each facility's owner and operator. States also have a critical role in monitoring and overseeing these units, so the EPA is providing the states with all the information it has on the facilities in their respective states. EPA informed facility owners and operators through final letters that are posted below.

Ratings summary for the assessments:

	Round 1	Round 2	Round 3	Round 4	Round 5	Round 6	Round 7	Round 8	Round 9	Round 10	Round 11	Round 12	TOTAL
Satisfactory	22	31	15	23	15	3	34	9	29	20	13	27	241
Fair	15	9	12	17	14	27	10	16	18	9	11	8	166

Some companies have at some point claimed some information they have provided to the EPA related to their coal ash impoundments is confidential business information (CBI). EPA has, to date, reviewed each claim of CBI and has made the determination in all cases to deny the claim. All the documents have now been made publicly available and have been posted to this website. **CBI claims summary here.**

Reports Key

- **Cover Letter:** Letter from EPA to facility requesting that the facility develop an Action Plan to address recommendations from the Final Report.
- **Draft Report:** Initial report from EPA's contractor.
- **Comments:** Compiles comments from EPA, state, and company on the Draft Report.
- **Final Report:** Incorporates comments, as appropriate, from the EPA, state, and company as well as any information/data the company provided to EPA between when the report was initially drafted and finalized.
- **Company Response/Action Plan:** the responses from the facility to EPA's Cover Letter.
- **Final Letter:** Letter from EPA to the company explaining their responsibility for ongoing routine assessment of their CCR impoundments.

CBI claims

The companies in the table below have at some point claimed some information they have provided to the EPA related to their coal ash impoundments is confidential business information (CBI). While EPA reviews these claims, the information that is claimed as CBI is not posted to EPA's website. If these claims are accepted by the EPA, the coal ash reports will be posted in redacted form. If EPA denies these claims, all the information will be made publicly available and posted to this website.

Company that claims CBI	EPA's Determination
Alabama Power Company – Barry Power Station – Ernest C Gaston Power Station – Gadsden Power Station – Gorgas Power Station – Greene County Power Station – James H Miller Power Station	Denied Denied Denied Denied Denied Denied
Ameren UE – Coffeen Power Station – Duck Creek Power Station – ED Edwards Power Station – Hutsonville Power Station – Labadie Power Station – Meramec Power Station – Meredosia Power Station – Newton Power Station – Sioux Power Station – Rush Island Power Station	Denied Denied Denied Denied Denied Denied Denied Denied Denied Denied
Duke Energy Corporation	Denied
Eastern Kentucky Power Cooperative, Inc – Dale Power Station – HL Spurlock Station	Denied Denied
First Energy Generation Corporation – Little Blue Run Dam	Denied
Georgia Power Company – Bowen Power Station – McIntosh Power Station – Plant Branch or Harlee Branch Power Station – Plant Hammond – Plant Kraft – Plant Mitchell – Plant Yates – Plant McDonough – Plant Scherer – Wansley Power Station	Denied Denied Denied Denied Denied Denied Denied Denied Denied Denied
Gulf Power Company – Lansing Smith Generating Plant – Crist Generating Plant – Scholz Generating Plant	Denied Denied Denied
Mississippi Power Company – Plant Jack Watson	Denied
Northern Indiana Public Service Company (NIPSCO) – RM Schahfer Power Plant	Denied
